

# POWERFUL PROCESS AUTOMATION WITH THESIS

THESIS is the newest process automation platform to launch in the UK.

The objective of business process automation is making your business more efficient – vital to your competitiveness in the wider market.

With THESIS, organisations can automate routine business processes out-of-the-box or use our 'Workflow Designer' module to create templates to automate more complex and business-specific processes.

If your organisation is suffering from inefficient processes, unnecessary delays or bottlenecks, business process automation can help.

## WHY SHOULD YOU AUTOMATE BUSINESS PROCESSES?

- Eliminate repetitive tasks to free up time for your employees to focus on bigger projects
- Enhance collaboration between different departments through streamlined workflows
- Manage employee workloads to stay on top of deadlines and exceed project expectations
- Increase efficiency and productivity to improve your bottom line

## Use case: managing POs

Purchase order lands in inbox

Saved on shared drive

Emailed to another colleague

Saved locally on PC

### WHAT'S WRONG WITH THIS?

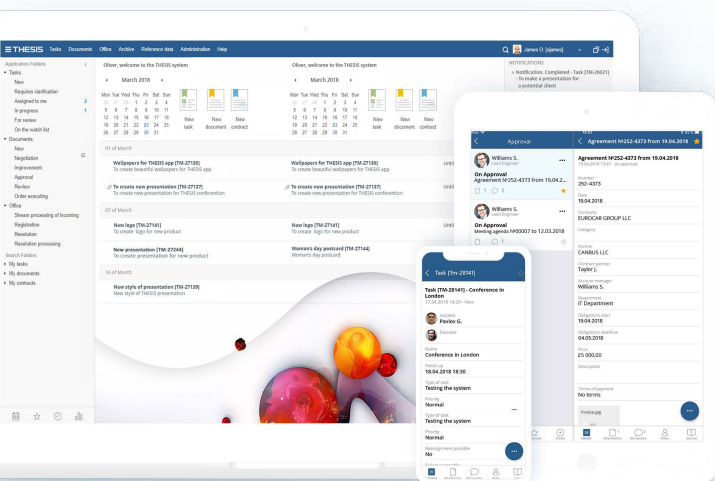

The user still needs to give an instruction to the next person in the chain to deal with the document. There is no control over the document, no visibility and no way of managing how long it takes to process

## With THESIS:

Purchase order  
lands in inbox

Outlook integration means  
the document can be uploaded  
to THESIS with one button click

Lifecycle of document  
managed in THESIS

## BENEFITS:

- Fully trackable document
- Version control
- Full audit trail
- Manager visibility to identify any bottlenecks and speed the process up
